'As a future-oriented family-run company, we embrace a spirit of partnership with our customers, suppliers and employees. Our focus is on the individual.'

Jürgen Greiwing

WE ARE GREIWING

To us, GREIWING is much more than just a company name – it is the name of our founder and of the family that still runs the company today. This is now the third generation of family ownership. A clear sign of cross-generational quality awareness. Our 90-year history has made us what we are today. Our roots shape our character and ensure our down-to-earth principles. We are an internationally operating specialist for free-flowing and packaged products in the food and non-food industries. And we are the reliable partner at your side. Every day. Now and in the future.

Logistics solutions from a single source

EXPERTISE ALONG YOUR VALUE CHAIN

We have expanded extensively over the years in order to offer you the broadest possible range of services and to manage the entire value chain in a bundled manner. Today, we are a strong group of companies with multifaceted services for the entire range of your logistical requirements.

In addition to GREIWING logistics for you GmbH, SEPARATION AG and KTV Speditionsgesellschaft mbH belong to our group of companies. More than 1,200 employees work at more than 20 locations throughout Germany and at one location in Belgium.

We specialise in the chemical, plastics, food, paint and lacquer, construction and hazardous materials industries. Our service portfolio includes conventional and combined transport, storage and handling. When it comes to providing value-added services, as a logistics service provider, we are often involved at an early stage of the value chain of our clients – for example, when sorting, homogenising or drying granules, or on-site – directly at the customer's premises. In order to be able to process all products professionally, we have special equipment such as autoclaves and clean rooms as well as the granulate technology centre in Wesel, which is unique in Germany, and two mobile granulate sorting systems.

We have achieved a great deal together and are constantly expanding the expertise and locations of our company group. With such a strong foundation, we look to the future with eagerness and enthusiasm.

for the chemical industry:

- Filling
- Crushing and grinding
- Storage
- Logistics consulting
- Mixing and homogenising
- Sample shipping
- Quality control
- Sieving
- Transport and combined transport
- Drying
- Refilling and ensiling

Proven formula for success

WE FOR THE CHEMICAL INDUSTRY

Process optimisation at the operational level and intelligent supply chain management for producers and recipients of chemical products are becoming increasingly important as a value-added factor. We help you to optimise both, and thus improve your profitability over the long term. Many of our customers, which are among the world's leading companies in the chemical industry, benefit from our process expertise and experience.

In addition, we provide all disposal logistics services, silo transport and more, including the supply of additives, seamless control processes, packaging processing according to defined specifications and the storage of all goods. We carry out these services for raw material producers, importers and exporters in the chemical industry, as well as for and with their customers.

Our aim is to ensure your profitability at all times while meeting ever-increasing demands.

Services that stand the test of time

WE FOR THE PLASTICS INDUSTRY

The requirements of the plastics industry are diverse. Just like our portfolio of services for you. We offer you logistics solutions such as storage and filling services for granules, and transport services for your goods. In addition, we support you with special separation technology for the individual processing of contaminated plastic granules – on request, also on-site with our Mobile Granule Clinic®. In this way, we not only enable you to continuously utilise your production capacity, but also increase the market value of your goods.

Thanks to our process technology for drying, sorting, sieving and homogenising plastics, we are able to achieve a guaranteed granule quality for you. Our pressure silo containers are standardised for all modes of transport and can therefore be used worldwide.

LEARN MORE

PLASTICS INDUSTRY

for the food industry:

- Filling
- Fumigation
- Crushing and grinding
- Storage
- Logistics consulting
- Sample shipping
- Quality control
- Cleaning
- Sieving
- Transport and combined transport
- Drying
- Refilling and ensiling

Logistics services with purity regulations

WE FOR THE FOOD INDUSTRY

As a strong partner for the food industry, we take on all logistics tasks for granulated and powdered foods as well as for the associated intermediate food products. In this way, we enable you to optimise your sphere of activity – even worldwide. In order to guarantee the quality of your products, we have systematically separated the treatment of food and non-food products. A self-contained unit at GREIWING deals exclusively with the treatment of free-flowing food products and organic food substances.

Thanks to our own clean-room technology, we guarantee the highest levels of purity. Because all of the components of our technical systems and vehicles that come into contact with products comply with the most stringent requirements of food law. That's why your goods are always in good hands with us.

Showing our true colours in a partnership

WE FOR THE PAINT AND LACQUER INDUSTRY

The right framework conditions play an important role in life, including in the paint and lacquer industry. With our experience and our precise processes, we create the logistical basis for you to move raw materials and product components safely while at the same time ensuring their absolute purity. This measure is an economic necessity for your company, especially in times of rising raw material prices.

With our logistics solutions, we support the European paint and lacquer industry on its path to a leading role in the world – and help to secure this status in the long term.

Foundation for the future

WE FOR THE CONSTRUCTION INDUSTRY

The entire construction industry benefits when one cog interacts with the other. We at GREIWING are the right cog for all logistics services. With tailor-made just-in-time concepts, we guarantee the delivery of raw materials throughout Europe at the agreed time. This enables you to carry out projects more efficiently and minimise your own storage costs. In addition to the timely transportation of raw materials such as cement, lime, plaster, special raw materials and building materials such as roof tiles, we also provide a wide range of product handling services. You benefit with us as a strong partner at your side and from long-term improvements to important processes within your value chain.

LEARN MORE

We focus on safety

HAZARDOUS MATERIALS

As part of the German industrial sector, absolute safety is our top priority – especially when dealing with hazardous materials. Our services for hazardous materials in granulated, powdered and fine-particulate form meet this high standard and comply with the strict safety regulations for the use and disposal of these sensitive substances.

Thanks to our many years of expertise in this complex subject matter, we have extensive knowledge in this area. We handle the storage and trans-shipment at our locations in Burghausen, Duisburg and Worms. The focus is always on absolute safety for people, animals and the environment. With complex safety systems and trained personnel, we ensure that all hazardous materials that you entrust to us are handled correctly.

LEARN MORE

Our services
in the field of hazardous materials:

- Filling
- Crushing and grinding
- Storage
- Logistics consulting
- Mixing and homogenising
- Sample shipping
- Quality control

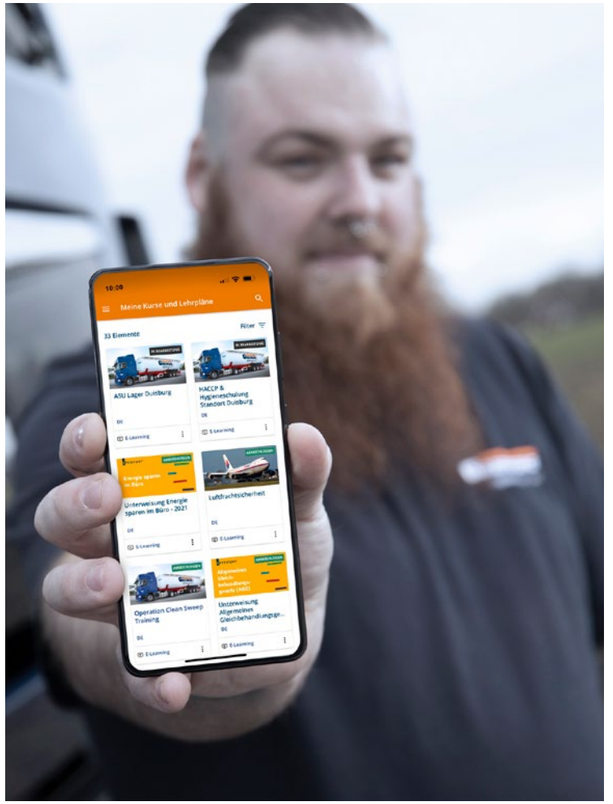
- Ensiling
- Pallet storage
- Container handling and container storage
- Silo inventory monitoring
- Silo loading
- Loading of packaged products
- Maintenance and servicing of the mechanical and plant engineering

On-site

ALWAYS WHERE YOU NEED US

Our aim is to optimise and simplify processes so that you can concentrate completely on your core business. For this reason, we deploy our staff directly on-site and thus offer you complete flexibility. Close partnerships and cooperation result in dynamic and fluid processes. We offer a wide range of individual on-site services that are tailored precisely to your needs.



Data-supported processes for greater efficiency

WE TAKE ADVANTAGE OF THE OPPORTUNITIES OFFERED BY DIGITISATION

Digitisation offers great opportunities for overcoming everyday challenges. Making company, service provider and customer data available in the highest quality – always and everywhere – gives us a tremendous competitive advantage. That's why we at GREIWING are pushing ahead with the systematic development of our processes on a data-driven basis across the entire group of companies.

This includes the digitisation of our internal and external communication, which can be completely retraced; the GREIWING e-learning platform, which greatly simplifies the exchange of knowledge; and digitally based warehouse processes, which are rapidly reducing the sources of possible errors. And this is just the beginning, because IT specifications in logistics are anything but rigid or definitive. That's why we work every day to optimise our digital structure. In order to be even more efficient for you.

Our digitisation measures:

- Mapping of all business processes in our SAP ERP system
- Digitisation of internal and external communication
- Scanner-supported warehouse processes and digital document management
- Internal expertise to support and further develop the system landscape
- Digital exchange of information with all employees via the GREIWING app
- Our own e-learning platform

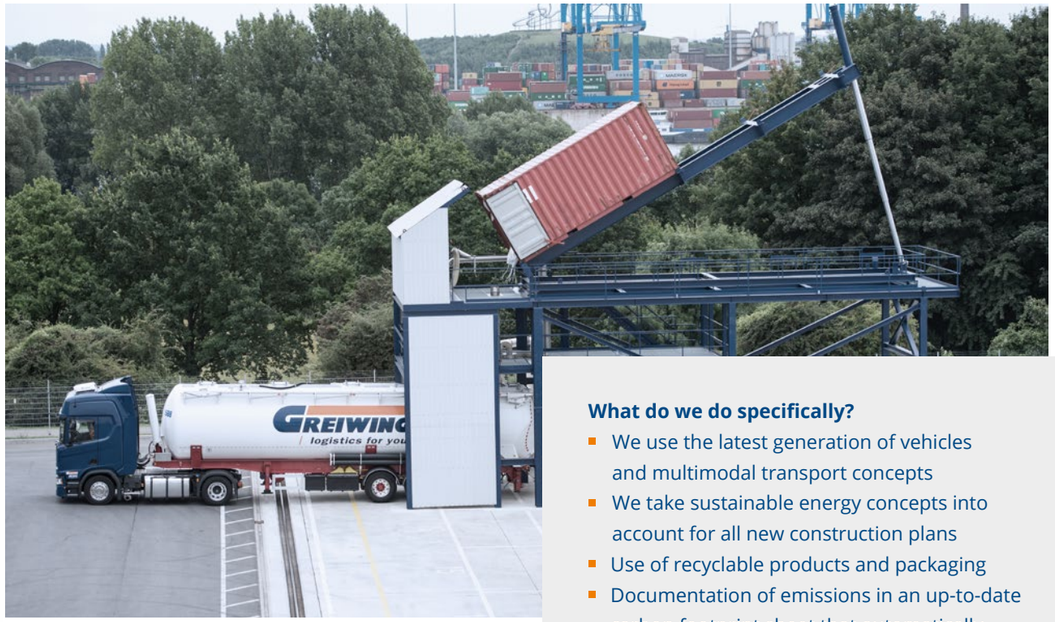
Commitment to more sustainability

WE TAKE RESPONSIBILITY

The future is made today. This applies not only to economic success, but also to social responsibility and the preservation of our environment. That is why we as a company together with our employees make sure that this maxim is brought to life.

For us, sustainability specifically means taking social, ecological and economic interests into account in every business decision.

To ensure this, we have been implementing various sustainability strategies for years, which are regularly reviewed by an independent sustainability ranking. In this ranking, we are among the top 25% of our industry. This is no reason for us to rest on our laurels – because we want to be a sustainable role model, not just today, but also in the future.



What do we do specifically?

- We use the latest generation of vehicles and multimodal transport concepts
- We take sustainable energy concepts into account for all new construction plans
- Use of recyclable products and packaging
- Documentation of emissions in an up-to-date carbon footprint sheet that automatically collects and analyses all relevant data

Methodical location placement

WITH LEADING EDGE TO THE GOAL

Our locations throughout Germany and our logistics centres at strategically placed hubs enable the best-possible connections – both by land and sea.

We effectively bundle customer and goods flows and plan them efficiently. We are thereby able to reach a new level of sustainability and flexibility.
